

THOMAS BACHORZ

FULL-STACK SOFTWARE ENGINEER

815-503-1373 | TJBachorz@gmail.com

GitHub | LinkedIn | Portfolio

MISSION

Full-stack software engineer with 5+ years of production experience across React, Ruby on Rails, Python, and Java/Spring Boot. Passionate about leveraging AI tooling to multiply productivity, automate workflows, and build smarter systems. Known for end-to-end ownership, debugging complex issues across the full stack, and bridging the gap between engineering and business stakeholders.

EDUCATION

Full Stack Software Engineering

Flatiron School — Denver, CO
11/2020

Concise Course in Brewing Technology

Siebel Institute of Technology — Chicago, IL
11/2012

B.S. Cinema and Photography

Southern Illinois University — Carbondale, IL
06/2010

SKILLS

React / React Native
TypeScript
JavaScript
Claude AI / Claude Code
Ruby / Ruby on Rails
Node / Express JS
Python / Django
Java / Spring Boot
PostgreSQL
GraphQL
Vue JS
HTML / CSS / SCSS
AWS

WORK EXPERIENCE

Yield Solutions Group — Staff Developer

02/2021 – Present

Greenwood Village, CO

- Serving as primary maintainer and lead developer of the company's core customer-facing React application — the single platform used by every representative to interface with customers — ensuring reliability, iterating on features, and preventing costly production outages over 5+ years.
- Acting as the primary technical escalation point for company representatives, unblocking time-sensitive deals by debugging React application issues, resolving PostgreSQL data discrepancies, and eliminating unoptimized API calls — directly contributing to closed deals and saving thousands of dollars in integration costs.
- Architected and delivered a full TypeScript documents admin application, owning the feature end to end from technical design through production deployment and ongoing support.
- Architected and delivered a Vue-based internal webapp — including a complex tabling system for the titling department — that reduced a backlog of nearly 10,000 outstanding items to under 1,000 within the first few months of deployment.
- Leveraging Claude Code to identify and resolve performance bottlenecks and UI inconsistencies in aging codebases, resulting in 75% faster load times and a more cohesive visual experience.
- Designing and overseeing multiple TypeScript-based Single SPA micro-frontend applications tied to individual micro-services, modernizing the UI within a large monolithic system and delivering a significantly more seamless user experience.
- Diagnosing and remediating CVEs across legacy libraries and outdated dependencies, maintaining SLA compliance and eliminating a class of known security vulnerabilities.
- Implementing consistent unit and end-to-end testing across multiple micro-frontends using Jest and Cypress, providing valuable insight into failure points and accelerating debugging and resolution.
- Acting as technical coordinator between internal development, product, and third-party partners across a 20–30 person international team, driving smoother rollouts through continuous cross-functional communication and rapid iteration across stakeholder groups.
- Engineering reusable Claude AI hooks and skills shared across the development team, adding automated quality guards, eliminating repeated manual tasks, and improving overall code consistency.
- Assisting with the onboarding and mentoring of junior developers and new hires, accelerating their productivity within a large and complex codebase.

SW33T.com — Freelance Web Designer

11/2020 – 03/2021

- Developed features independently using JavaScript and PHP in a remote environment, delivering efficient project turnaround for clients.

SOFTWARE ENGINEERING PROJECTS

ABC Data Logger

[Frontend](#) | [Backend](#) | [Demo](#)

- Mobile app for behavioral therapists built with React Native / TypeScript and Python/Django, featuring JWT authentication and client data graphing.
- Implements a RESTful Django backend to persist user session data and behavioral records, with fast HTTP request handling across all client interactions.

CI/CD
GitLab
Jest / Cypress
Jira

INTERESTS

Brazilian Jiu-Jitsu
Dog Training
Ice Hockey
PC Hardware
Hiking
Game Design

Outdoor.sy

[Frontend](#) | [Backend](#)

- Full-stack customer intake system (React / Ruby on Rails) with a custom file parser that sanitizes raw .txt files into a structured PostgreSQL database via validated CRUD endpoints.
- Designed a dynamic, sortable table UI allowing users to browse customer records by name or vehicle type, with backend validations enforcing data integrity and email uniqueness.

Looksy

[Frontend](#) | [Backend](#) | [Demo](#)

- Augmented reality home-decorating app using React, Ruby on Rails, Node/Express/AWS for file uploads, and Google's model-viewer to render interactive 3D models in-browser.
- Utilizes a dual-backend architecture — Rails API for JWT-authenticated user and model data, plus a dedicated Node/Express service with AWS S3 integration for image upload and URL management.

Epic Beer Run

[Frontend](#) | [Backend](#) | [Demo](#) | [Hosted](#)

- Road trip planner for hop-heads to map out their next brewery vacation, built with React and Ruby on Rails with BreweryDB API integration.
- Constructs a clean, interactive map using TOPOJSON, react-simple-maps, and react-tooltips with dynamic brewery data rendered per state.
- Implements a React Drag-and-Drop UI for instant point-to-point brewery route building.
